NUMBER 27

Mutual Openings of Two Raymond Wards Held

Mutual opening socials for both Raymond wards were held last Tuesday evening, and good crowds were present and a spell of time reported in both wards.

FIRST WARD

The festivities of the First Ward were held in the Opera House, and starting at 8:30 the first item on the program was refreshments of ice cream and cookies. Then from 9:00 to 9:30 games were enjoyed, especially the Social Mixers, where everyone got acquainted, and were in just the right spirit to enjoy the dancing which lasted from then until midnight, the "Ram-onion" Orchestra furnishing the music, and the Opera House being filled with dancers.

SECOND WARD

The Ward Chapel was well filled with members when the social there started at 8:30, a nov-

erty program of interesting numbers being given.

A costume dance was given by Misses Mary Knight, Ila Hicks and Maureen Redd. Mesdames L. D. King, Jas. H. Walker and V. Phillips gave an Irish comic skit which kept the crowd in gales of laughter.

The Misses Necia and LaVon King and Sybil Bacon delighted the audience with their rendition of several popular songs.

Miss Lenore Scoville told a very interesting animal story that greatly delighted all the younger members of the crowd.

A period of interesting games followed and then all enjoyed dancing for the remainder of the evening.

Both Mutuals are commencing their winter work next Tuesday evening, and everyone is invited to participate with them in their programs each week.

Real Exhibit at School Fair

Despite the cool weather, and threatend storm, all day Thursday, there was a good crowd at the School Fair all day, looking over the exhibits and showing a fairly keen interest in the work of the children. There were a great many entries in every class of the fair, excepting Livestock and Poultry. Here the exhibits were few in number but there were some of good quality. The judges were generally well pleased with the quantity and quality of the entries and in commenting on this phase of the Fair Miss McIntyre of the Olds School of Agriculture staff, who judged the Cooking Sewing etc., said, "The vegetables and the flowers are the best of any Fair we have visited yet. Sewing could be improved, there are not enough exhibits and they should conform more closely to the instructions of the handbook. Cooking entries should be increased, but quality was excellent." She would like to see more next year.

The vegetables on the table for Socials were especially interesting and of a very splendid quality. One entry of tomatoes were exceptionally uniform in size and shape, and were great large ones too. In one collection of vegetables there were almost every kind of vegetables, with three or four kinds of peas and half a dozen varieties of beans, besides dozens of other varieties.

Speaking of attendance, Mr. Benn, of the Staff at Olds, who judged the flowers and vegetables, said, "The ladies must be lack of interest in the Fair," having a party, judging by the fact that more interest should be taken, and told of his experience in Coalville, where they were about decided to drop the Fair, and with a little encouragement and co-operation they had organized with official separate and apart from the school and had the fair going strong and money on hand to pay the prizes with.

Other judges were; Inspector Williams and Gibson, who judged the School Work, and Ivan Garrison, judging the Livestock. The children naturally take and the sardle of their eyes as a great interest in the Fair, they look over the entry tags to see how they have fared, and the sportsmanlike attitude they show when their pals win is worth a great deal to them and the older ones as well. Let's keep the School Fair going and help the children to appreciate the best in everything they do.

The following have contributed as mentioned to the Prize List and it is largely due to this fact, that the School Fair has been a success this year.

SCHOOL FAIR PRIZES

Fromm's Jewelry Store, Epenco Fountain Pen.
Halls Barber Shop, Bottle of Hair Tonic, 2 Hair Cuts, Finger Wave and Marcel.
Canadian Utilities, Flash light
Capitol Theatre, 1/2 doz. Show Tickets.
Vely's Barber Shop, 2 Hair Cuts.
Pope's Harness Shop, Fancy Bridle.
Stone's Service Store, \$2.50 in Merchandise.
Mehew Hardware, 2 Pocket Knives.
Mrs. Sabey, 4 Marceals.
The Green Lantern, Box of Peppermint Patties.
Togo Cafe, Box of Bars.
King Motors, Can of Ducer Car Polish.
Safeway Stores, \$2.00 worth of Merchandise.
American Cafe, All Day Suckers.
Ellis & Milling Co., Ltd., 50 lbs. O. B. Flour.
Lerson's Billiards 50c.
Dr. Hall, \$1.00.
Cash Meat Market, \$1.00.
Sugar City Motors, \$1.00.
Card's Service Station, \$1.00.
Hervey's Blacksmith Shop \$1.
Wm. Paris, \$1.00.
Bett's Shoe Shop, 75c.
Con. E. S. Hawk, 50c.
C. D. Compton, \$1.00.
Mah Laundry, 50c.
N. Jensen, Shoemaker, 45c.
Jones's Bakery, 2 doz. doughnuts.
Jos. Kovrig, Chocolate Bars.
Life Savers, Gum.
Farmco Service, Flash light.
Raymond Tailors, 2 Dresser and 2 pair of pants clemel.
Raymond Recorder 100 Laps with return address, 100 Sheets of Monogramed Note paper.
Raymond Pharmacy, 5 Unives Camera and Film.
Raymond Photo Studio, 8 x 10 Enlargement Mounted, 12 x 14" mount.
Raymond Mercantile, \$6.10 in Merchandise, \$3.00 Cash.
Mayor W. C. Meaks, \$1.00.
Club Cafe, Box of Bars.
Misses King and Jones, Permanent Wave.
T. Geo. Wood, \$1.50.
F. E. Osborne Ltd., School Supplies, Calgary, 2 Fountain Pens.

Other prizes have been donated and will be listed in next week's issue.

SHOOTING SEASON OPENS SATURDAY

Twelve o'clock noon, Saturday September 15, is the opening of the fall hunting season for ducks, geese & Hungarian partridge. The season for prairie chicken and partridge opens on October 1 and runs to the 15th with chicken shooting allowed a full month north of the Red Deer River.

Ducks are reported to be plentiful and Hungarian partridge are everywhere.

The Game Commissioner makes an appeal to all sportsmen to remember that the farmer is their best friend. Ask permission to hunt on his land, don't break down his fences, close his gates, and don't let your dog annoy his domestic fowl or his livestock.

Red Label Beef Breed- ers Will Continue with New Contract

C. R. DANIEL ELECTED PRESIDENT OF GROUP—CONTRACT FEEDING LAMBS WILL NOW BE INTRODUCED—AND FEEDING CONTRACT ADOPTED

The annual meeting of the Red Label Feeders' and Breeders' association was held in the Marquis hotel on Tuesday evening, with forty feeders and ranchers present. C. R. Daniel, who was elected President, occupied the chair with Secretary Chas. Asplund recording the proceedings of the meeting. The two features of the evening were, report by the marketing agency read by W. C. McKenzie, manager of the Southern Alberta Co-operative Association, Ltd., and the adoption of a feeding contract for the coming year.

CATTLE EXPORTS

The report showed that the head of Red Label cattle to Great Britain during the spring months of 1934. It also dealt with the many activities of the organization in the feeding of cattle last winter.

The question of feeding this year was discussed. Present high prices of feed, coupled with low cattle prices, caused considerable discussion.

Sharing according to their equity in the enterprise a new and more equitable contract was presented and finally adopted at the meeting. Speakers at the meeting were I. B. Roberts of Raymond, Dr. Fairfield, Wm. H. McIntyre of the McIntyre Ranch, George G. Ross of the Ross Ranches, St. Kilda.

Officers elected were as follows:

President—C. R. Daniel, Lethbridge.

Vice-President—I. B. Roberts, Raymond.

Secretary—Charles Asplund, Raymond.

Directors—Dr. Fairfield, Lethbridge, Sam Harker, Glenwood.

Lamb feeding was also discussed. Contract feeding of lambs will be introduced in Southern Alberta this year. A number of lamb feeders were present at the Red Label cattle feeders' meeting. The 1934 western lamb contract was adopted.

WEDDING BELLS

SALMON - ANDERSON

The marriage was solemnized Thursday, at the Alberta Temple of Mr. and Mrs. John F. Salmon, and Miss Mabel Anderson, daughter of the late Mr. and Mrs. Moses Anderson of Cardston, with President Wood officiating and 25 or 30 family relatives present.

Following the ceremony the young couple left on a honeymoon trip to Calgary and other points, and on their return will make their home in Raymond, "Bob" having taken rooms in the Erickson home for the winter months.

Both are popular young people of the town, the groom having been President of the Second Ward Mutual for the past two years, and the bride having served in the Primary Sunday School and Mutual since she took up residence here with Mr. and Mrs. W. A. Anderson over a year. The best wishes of the community are extended to them for a long and happy married life.

Mrs. Arthur Dahl was in Lethbridge Thursday to consult the doctor. She has been unwell for some time past.

Stanley Cook is around again and seems to be feeling pretty good, after his very serious accident early in the summer.

Quite a number of Taylor Stak people attended the Temple opening Wednesday, there being about seven cars from Raymond and the same number from Magrath, with two from Stirling and one from Welling. A very pleasant day is reported by all who attended.

WEEDY LETTER

STORING AND PURIFYING DRINKING WATER ON THE FARM

Storing and purifying drinking water are important considerations on many prairie farms where suitable well water is often not available and water for drinking must be hauled. Whether taken from a neighboring well, from a nearby lake or stream or from a reservoir or irrigation canal a good cistern equipped with a sand filter is needed for storing the water and keeping it free from contamination. Water cisterns are usually built of concrete, of wood, or bricks laid in cement mortar. Choice of material will depend on the material available, the conditions under which the cistern is to be used and the skill and experience of the builder.

Concrete is very durable where where excessive alkali is not present which, unfortunately is the case in most of our irrigated districts. While the first cost is quite high concrete makes a tight fitting cistern that is easily kept clean. A mixture of 1 part of cement, 2 parts of clean sharp sand and 4 parts clean gravel is generally used. Replacing about 15% of the cement with hydrated lime will make the concrete more water proof. Only enough water is added to make the concrete pour properly. Any excess water will weaken the structure. A circular tank gives maximum strength and storage space for any given amount of material used. Making circular forms for the concrete is a difficulty. This is overcome by making the concrete tank six-sided or hexagonal shaped. "A six sided tank with each side five feet inside has a capacity of 104.6 gallons for each foot of depth. A depth of 12 feet 4 1/2 inches gives nearly 5000 gallons."

Brick is sometime used in place of concrete. A mixture of 1 part cement and 2 parts sand is used for mortar and the inside wall is plastered with a rich cement mortar to make the cistern as water proof as possible. The bricks should be thoroughly soaked before being

laid. The brick cistern makes a neat job and by bringing the top in line the neck of a bottle a good tight cover is obtained. It is here where the skill of a bricklayer may be required.

Wood makes a very good cistern. Its first cost is relatively low. Its great advantage is its resistance to alkali and it is fairly simple to install. The best plan probably is to buy the material ready sawn and planned from a lumber company. The staves used are 2" X 6" material and the edges are beveled to give the size of circle required but need not be tongued or grooved. A tank ten feet in diameter and 12 feet deep gives a capacity of 7,050 gallons or 22 1/2 barrels. Rod bands that circle the tank hold the staves in position the same as on a silo, and if needed, hot tar or pitch is poured into the joints, especially the floor, to make the tank watertight. It is well to have the floor material tongued and grooved. Two inch planks with the joints well filled with pitch make a covering for the tank.

Any water from an irrigation ditch, a storage reservoir, or from any other contaminated source should be filtered before it is put into the cistern. Clean sharp sand that is neither too fine nor too coarse makes a good filtering material for ordinary use. The water needs to run through two to three feet of sand and at the rate of about 50 gallons to each square foot of filter every 24 hours. A plan of this type of filter may be obtained by writing to this station.

In addition to filtering it is a common practice to treat cistern water with chloride of lime and a question often asked is how much to use. The rate recommended is 25 grains for 100 gallons of water. On this basis a tank holding 5,000 gallons would require somewhat less than 3 ounces of fresh chloride of lime to make it safe for drinking. One-half a level teaspoonful of chloride of lime dissolved in a quart of water will treat a 40-gallon barrel of water. Chloride of lime should be purchased in small quantities and be kept tightly covered because it deteriorates quickly when exposed to light or air.

HELP THE TEACHER HELP THE CHILD

Folks, we are all rather guilty of expecting the teacher to do it all for us when it comes to educating our children for us. We seem to get the idea that because the children go to school 5 hours a day for five days of the week for approximately ten months of the year, that this should be all that is necessary to teach the child proper deportment, home life, proper habits of diet, rest, and the thousand and one other things that enter into the normal life.

This is a terrible mistake, and the sooner we wake up to the truth of this statement, the better it will be for all of us. True, there has been a gradual and tremendous change from the R's of thirty years ago in school to the present course, even for the smaller grades, where the children are taught generally in the things that are proper in exercises, proper mastication of food, proper rest, the need for fresh air, good behavior and many other things in connection with the school studies proper, but folks, however hard the teacher tries the parent can undo more in an hour than the teacher can build up in a month, because the child is with the parent nineteen hours a day nearly and seven days a week compared with the small fraction of time that he or she spends in the presence of the parent.

As parents we should co-operate in a sensible manner with the teachers in both school and church in trying to make the child's education part of his life every day of the year. When teachers teach proper

mastication of food, and the parents tell the children to hurry and get their meals down them and get out of the way, the teaching of the instructor falls on stoney ground, and so it goes in every phase of life where the child receives instruction. If your child is backward in school, having trouble with his or her work, go to the teacher and talk things over sensibly and quietly, and see if by extra homework and coaching on your part you cannot help the child to a clearer understanding of his problems. When it is necessary, as it nearly always is at times for the teacher to discipline students don't take the part of the student in the presence of the child, even though it may appear that the teacher acted badly and without proper consideration. Make the child feel that he should make himself subject to authority, and if you have a grievance, go quietly to the teacher or principal after school hours and have a quiet chat with them and talk things over.

Each teacher in the schools is there to benefit parent and child. We could make their work a great deal easier and more effective with our children if we would let them know that we are ready to co-operate with them and we will back them up in every effort they make.

Our next public holiday will be Thanksgiving, during the early part of October. No date has been announced as yet.

While trying to drive a cow into the barn, Mrs. George Gehmlich, 50, and the mother of seven children was attacked by the animal which bit her ankle, and after throwing her to the ground, bit her arm and side so that twelve stitches were necessary to close the wounds in her side.

Fritz Gehmlich met with an accident in the factory the other day when he fell off a tank backwards to the floor, lighting on his shoulders and bruising his left elbow so badly that he had to lay off work for a few days. His left wrist and hand were also badly swollen as a result of the fall.

CROP REPORT

GENERAL — In the prairie provinces harvesting has been delayed by unsettled weather but threshing is under way again in most districts and is well advanced in the southern and central areas of the three provinces. Frost damage has affected the grades in the north. Estimates place the western wheat crop at slightly above last year's yield. The yield of coarse grains is very light and roots and apples and peaches are much below average. In New Brunswick and Prince Edward Island crops continue to make good progress. In Nova Scotia yields will be materially below average due to lack of moisture. In British Columbia the yield of grain is about average. A particularly heavy second crop of alfalfa is practically harvested and tree fruits are ripening satisfactorily. Details follow:

PRAIRIE PROVINCES

ALBERTA — Northeastern Area—About 75 p.c. of wheat is cut. Coarse grains generally are poor. Southeastern Area—Approximately 50% of wheat crop has been threshed with an average yield of 8 to 10 bushels per acre. Coarse grains and feed crops are poor. Western Area—Wheat cutting is nearly completed. Threshing has been delayed in the north section but in the south about 30 p.c. of the wheat has been threshed with an average yield of 15 bushels per acre. Sugar beets are expected to yield 10 tons to the acre.

SASKATCHEWAN — Northeastern Area—Wheat cutting is nearing completion and threshing has commenced in most districts. The yields vary widely, with grades generally good. Coarse grains are light. Southern Area—Practically all grains have been cut and threshing of wheat is well advanced. A large acreage of wheat and practically all of the coarse grains have been cut for fodder.

MANITOBA —Threshing is well advanced and is nearing completion in some districts. Wheat marketed has been of good quality and the average yield is estimated at 13 bushels to acre. Coarse grains generally are poor and feed will be scarce in many districts.

PROVINCE OF QUEBEC

Growing conditions generally have been favorable the crops in the eastern townships have deteriorated somewhat from a lack of rain. Harvesting of grains is in full swing with the yields well up to average indicated in most sections. Corn is spotty, being good in some sections and light in others. Potatoes promise an average crop. Other roots are doing well. Tobacco is making good progress.

Following An Ideal

THE builders of Alberta Pool Elevators, the farm men and women who put their money, their time and their energy into the project, had definite ideas before them.

They wanted a co-operative concern, first and foremost, operating on the basis of a public utility, with the profit motive secondary to that of equity and service, and built upon the foundations of co-operation as established imperishably by the pioneers of the movement.

These ideals and principles have been followed as closely as possible by Alberta Pool Elevators. It is the ambition of the organization to make this co-operative enterprise respected and trusted by all grain growers, its operations an open book to its patrons and its standing built on widespread confidence. In its broad sense, confidence is the foundation of all human relationships which possess the quality of endurance. The growth and life of any institution depends on the confidence it inspires and commands and can hold.

There is no more unanswerable way of expressing confidence in the worthiness of the ideals and objectives of this movement than by deliveries of bushels—wagon loads and car loads of grain to

**THE PROPER CARE OF
YOUR AUTOMOBILE**
Auto Top Mouldings

ANOTHER thing to watch in the care of your automobile is that the top fabric does not crack along the mouldings. This is a danger that exists only on the more recent model cars. On older models, the top fabric covered the entire top of the car and extended down the side. On the newer cars, however, this fabric is set in a panel on the top and is fastened at the edges with moulding. In previous articles it was told how the top fabric, if not taken care of, will develop weathering which eventually starts cracks. A danger point for these cracks is along the moulding. Even the tops of new cars occasionally develop these moulding leaks. It is important, therefore, that the moulding on top of the car be inspected frequently to watch for the cracks. If the crack is caught in time, it is comparatively simple to make the repair. All that is necessary is to seal it with a waterproofing compound. This sealer may also be used for stopping leaks at the rear window, or for repairing cigarette burns in the top fabric. In repairing a hole caused by a cigarette butt, it is only necessary to apply some of the sealer around the hole, lay a small cloth patch over it, and then apply more of the compound.
